

SENTRY™

Breakthrough persistent monitoring software solution delivering predictive intelligence at global scale.

SEE IT BEFORE IT HAPPENS.
ACROSS ANY LOCATION IN THE
WORLD.

Sentry is a breakthrough persistent monitoring software solution that delivers predictive intelligence at global scale, enabling a new level of decision superiority for the most complex defense, intelligence and commercial missions.

This end-to-end solution integrates multiple sensors, including your own, with advanced production and AI-driven analytics to deliver real-time visibility across hundreds of areas of interest at once.

BUILT ON THREE UNIQUE MAXAR® CAPABILITIES:

Automated multi-collection orchestration

Automatically integrate feasibility and tasking scheduling processes across multiple satellite constellations, including electro-optical, SAR and even your own assets—dramatically increasing the number of sites you can monitor simultaneously.

Real-time data production & fusion

Optimize collected data through our advanced production processes and automated co-registration software to enhance for analysis at scale.

AI-powered insights

Utilize Maxar's object detection models as well as third-party technologies to identify signals about mission-relevant activity and patterns. These insights can then be delivered through a variety of channels—from the Insights UI within MGP Pro to your secure environment via API.

MONITOR HUNDREDS OF SITES SIMULTANEOUSLY

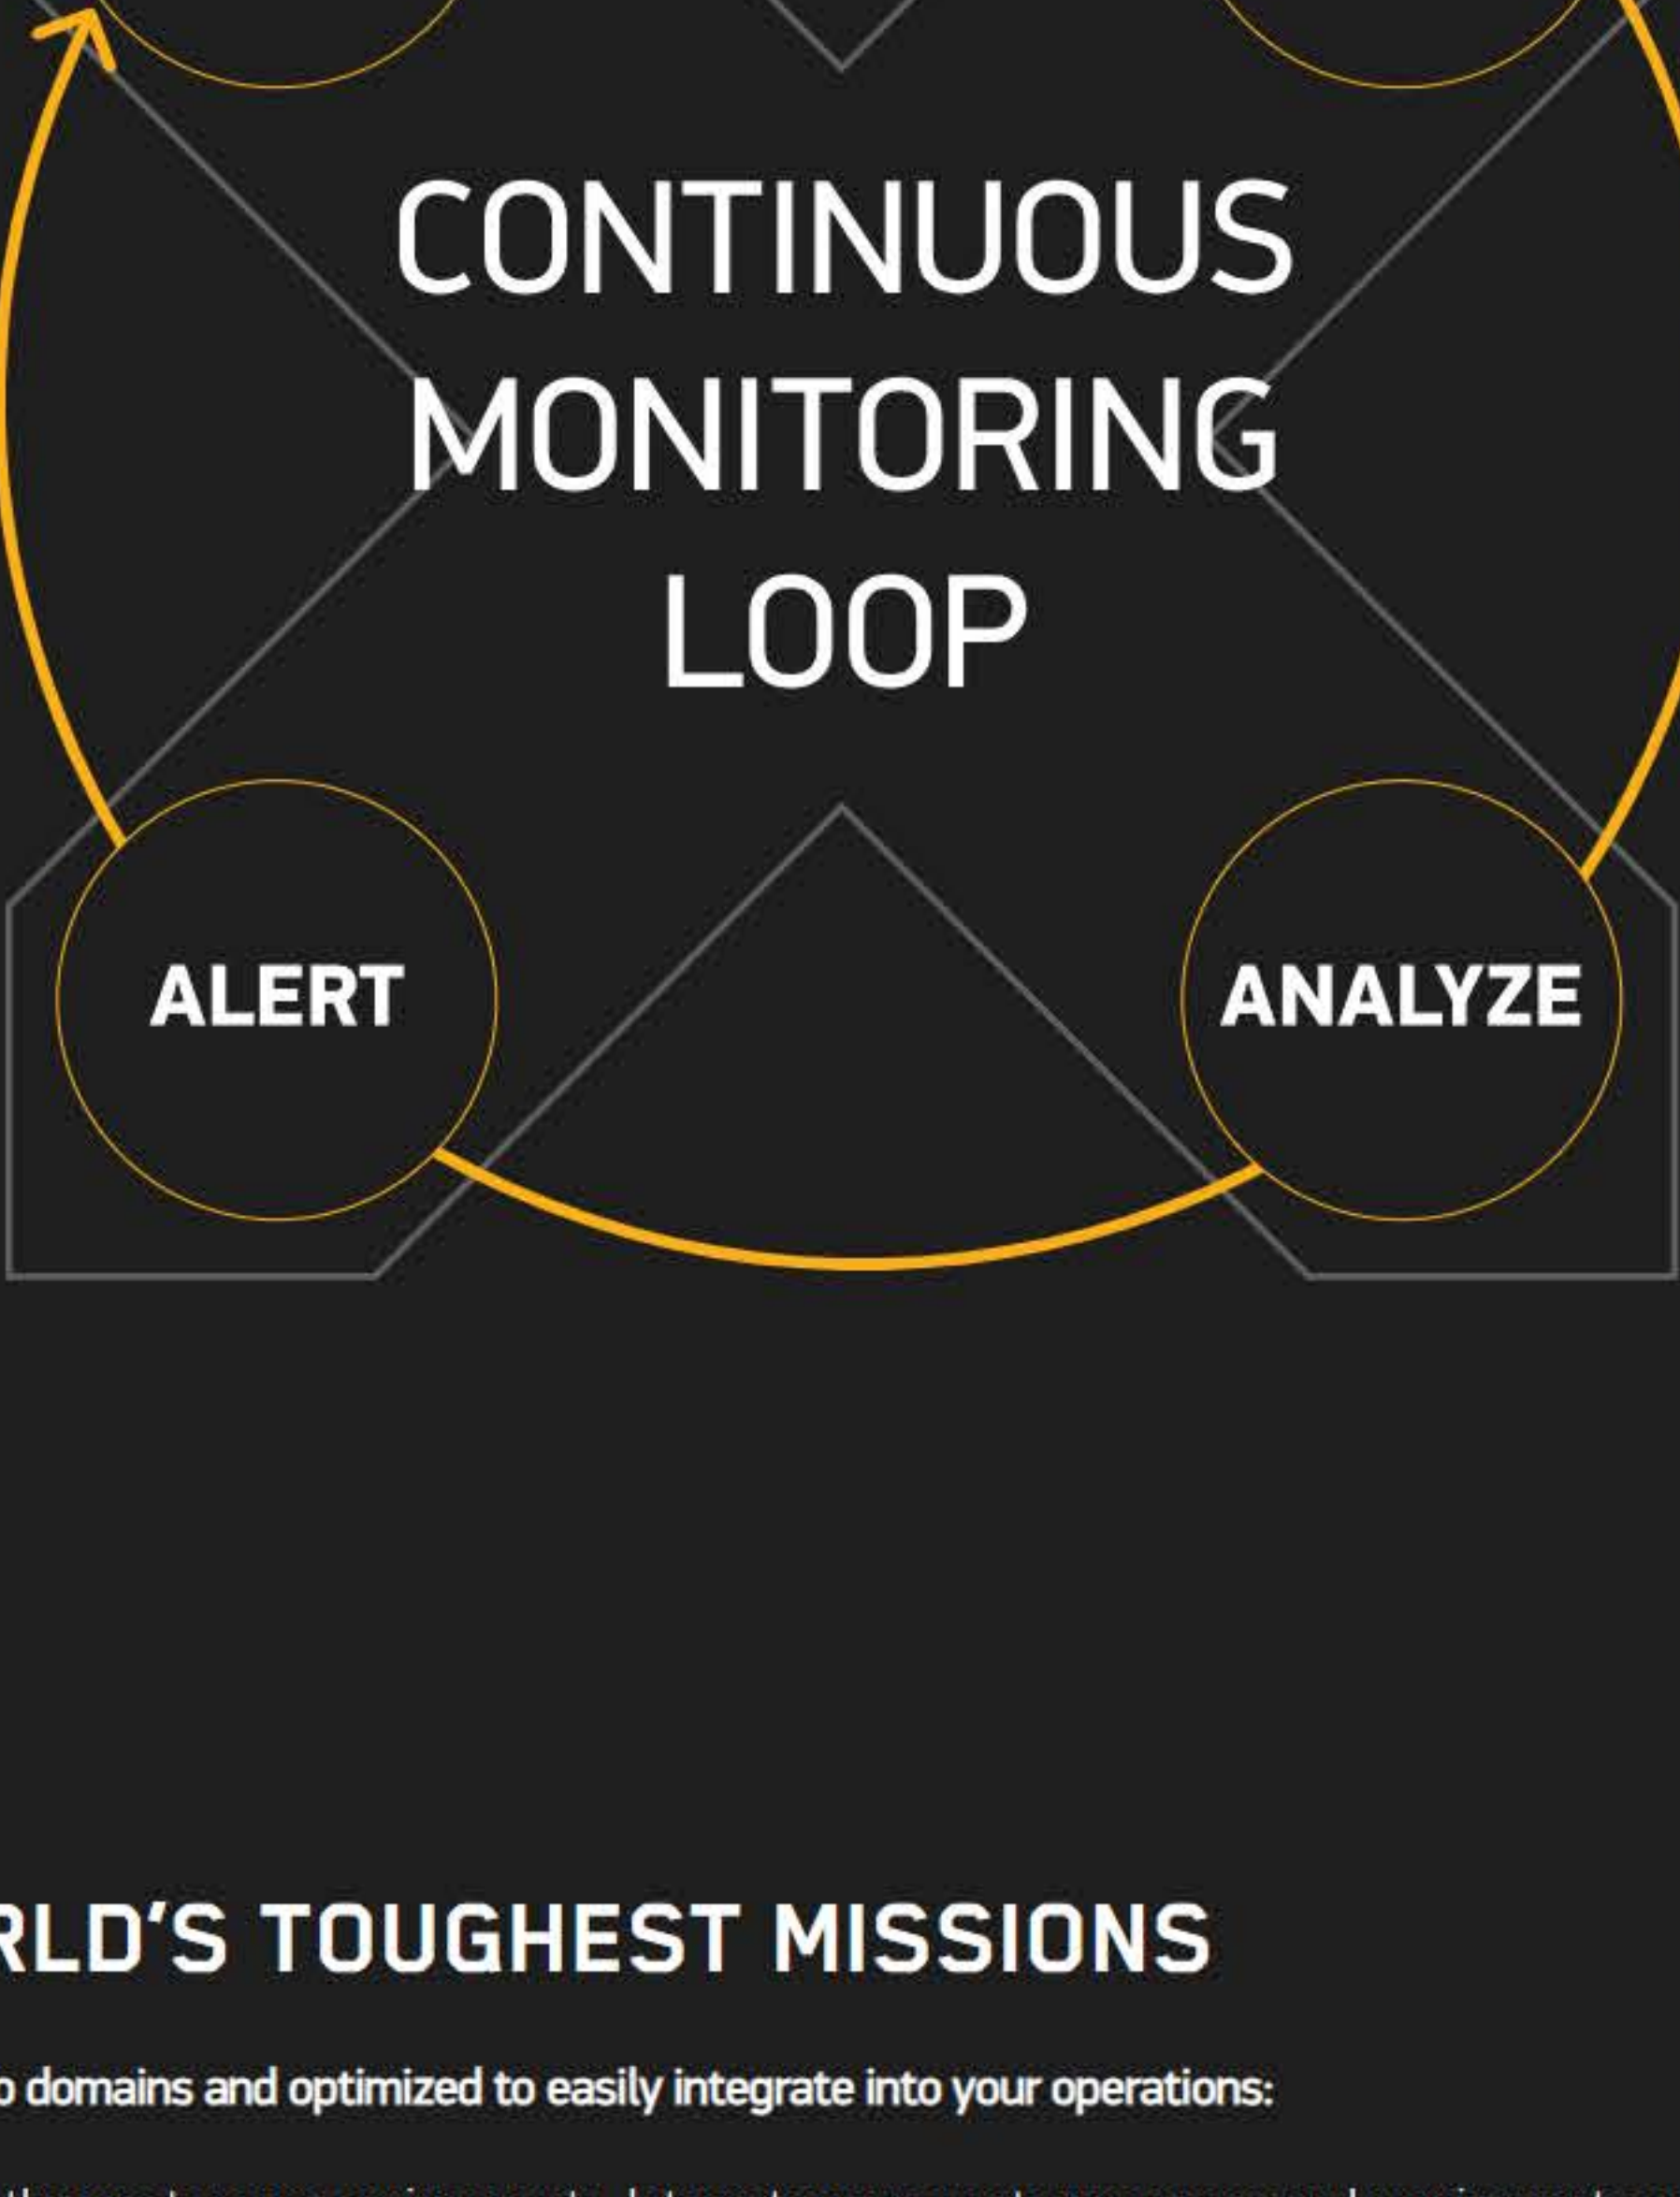

AUTOMATE THE INSIGHTS WORKFLOW

Sentry operationalizes the monitoring workflow—sending automated alerts only when mission-relevant activity or change is identified.

The system continuously monitors hundreds of locations simultaneously, reducing hours of manual analysis work otherwise spent on tedious or low-value tasks. By shifting the human focus onto the areas where activity is detected, analysts spend more time making decisions—not searching for clues.

Whether you need advance alerts predicting adversarial military activity or risks to your industrial infrastructure, Sentry gives you the intelligence you need to deliver real-time mission advantage.

See how our end-to-end process keeps you ahead of what matters most:

DESIGNED FOR THE WORLD'S TOUGHEST MISSIONS

Sentry includes two focused products designed for two domains and optimized to easily integrate into your operations:

Both products are flexible solutions designed for even the most secure environments. Integrate your assets, processes and requirements across any part of the workflow—from your satellites to your AI models to connecting and deploying into your private environments through secure APIs.

01. SITE SENTRY™

02. MARITIME SENTRY™

Detect and track vessels across thousands of sq km

Maritime Sentry delivers real-time maritime intelligence by combining automated multi-sensor tipping and cueing with advanced machine learning. Users can detect and identify vessels across vast ocean areas within minutes of collection, including dark vessels using proprietary AI capabilities.

Through the Maritime Sentry interface, users can zoom in on specific ships to identify cargo and activity details. From protecting territorial waters to combating piracy and trafficking, Maritime Sentry reveals exactly what's happening at sea, anywhere in the world.
